4.6	11.4	1140	8.55	855	13.3	1425	9.5	1050	15.2	1900	11.4	1425

Further Guidance

1. These are guidelines based on crop trials carried out during 2010-2012
2. Fields testing or known to be high in Magnesium may need higher rates or Calcium rebalancing using Calcifert Sulphur as well
3. When soil testing, always test for total Calcium and relate to soil type, eg sands lower, clays higher
4. Where minimum tillage is being used lower rates can be used on arable fields
5. Lime recommendations based on industry standard calculation below:

Lime Required (t/ha) = (Target pH - Field pH) x Lime Factor for Soil Texture

Information presented is intended for guidance only and given in good faith but without guarant
